

Lift Modernisation

Greater safety, efficiency and comfort

mplifts.com

mp moving people

The background of the entire page is a photograph of a man and a woman in a modern office setting. The woman, in the foreground, has long brown hair and is wearing a grey top; she is holding a white tablet. The man, slightly behind her, is wearing a light blue shirt and is smiling while talking on a mobile phone. They are both looking towards the right side of the frame. Overlaid on the image is a faint, geometric network of lines and dots, suggesting a digital or technological theme.

All types of solutions for modernising an existing lift

Modernise with MP to take
your lift to the next level.

Making sense in refurbishment

If your lift is suffering from wear or needs bringing in line with new regulations or technology, we have just the solution, designed to **extend your lift's useful life and improve its performance.**

The team at **MP** has extensive **experience and expertise** in **modernisation solutions which are efficient, convenient** for users **and economical.**

We adapt to your needs and offer **tailored modernisation** solutions.

Useful Life

Your **lift's useful life** depends on how much you use it and how well you maintain it.

Although it's not a precise art, a lift tends to have an **average useful life of 30 years**.
Your **maintenance company is responsible**

for keeping your lift in good working order and making sure you are fully informed of its condition.

What Implications Does Good and Bad Maintenance Have On Your Lift?

Poor maintenance shortens a life's useful life, is costly and means more repairs. Even worse, it makes life difficult for users and leads to your building becoming less accessible. The result? **Downtime, frustration and complaints.**

Good maintenance, on the other hand, ensures your lift is **working properly** and extends its **useful life** by:

Correcting
any issues

Repairing
components
and faults

Checking for
wear

IMPLEMENTATION**

SWIFT SOLUTIONS

We enjoy our work and offer our customers a service based on **closeness** as well as a wide range of **reliable** products.

How Can We Help?

There are many reasons for needing to **modernise** a lift, either partly or **fully**. At MP, we have them all covered.

A car with **walls and flooring which are outdated** or worn.

Regular faults, poor stopping accuracy or unintended car movement.

Ceilings with **fluorescent lamps** or lights which are **on 24 hours a day**, meaning greater energy consumption.

Narrow doors and car.

A lift which **cannot be accessed from the ground floor.**

Noise from the machine or **vibrations** in the car.

An old machine which **is not energy efficient** and pushes up your energy bill.

Long travel and waiting **times**, including a feeling that the doors take a long time to open or the lift takes a long time to start moving.

Modernisation Programmes

Each lift is a world of its own, with its own issues, and as such deserves a unique and fully tailored solution. At MP, we offer customised solutions as well as **programmes designed to help you modernise your lift.**

Safety Programme

Safety equipment, controller, machine and emergency telephone.

For **reducing the frequency of faults**, improving availability, minimising potential risks and adapting your lift to **new regulations**.

Energy Efficiency Programme

Car, controller and gearless machine.

For **reducing energy consumption** with LED lights, a stand-by system, a gearless machine or a regenerative system which uses the energy generated when the lift brakes.

Comfort Programme

VVVF or gearless machine and controller.

For **improving the user experience** inside your lift, including how smoothly it approaches landings, its stopping accuracy and the level of noise and vibrations it produces.

Connectivity Programme

GSM/LTE connection, controller connection equipment and SIM card.

Monitoring 365 days a year, 24 hours a day to **reduce response times when faults occur and alarms are activated**, as well as **increase your lift's availability and extend its useful life.**

Accessibility Programme

Car and landing doors, car and operating panels.

For a **bigger car and improving accessibility** by installing Braille buttons or sounds to provide users with information.

Aesthetics Programme

Cars, operating panels and doors.

For **enhancing the appearance** of your lift's car, doors, operating panels and displays.

Tailored Modernisation Solutions

If our standard programmes aren't quite what you're looking for, at MP we also offer **tailored solutions for your lift**.

Advantages of Modernising

Faster

A modernisation project takes less time.
For example, the most common modernisation project, i.e., a new electrical installation and machine, takes a week to complete, as opposed to three for a full replacement.

Less costly

Modernising is **more economical** and can be done bit by bit.

Less work

Upgrading involves **less building work** than full replacements.

More convenient

Less disruption in your building, such as dust, noise and your lift being out of service.

If modernisation isn't possible, we also have
the perfect model to replace your lift.
